

BUILDING PYTHON CODE

Date	18 NOVEMBER 2022
Team ID	PNT2022TMID31091
Project Name	AI-based discourse for Banking Industry

1: Importing Libraries

The first step is usually importing the libraries that will be needed in the program.

```
from flask import Flask,render_template
```

Importing the flask module into the project is mandatory. An object of the Flask class is our WSGI application. Flask constructor takes the name of the current module (`_name_`).

2: Creating our flask application and loading

```
app=Flask(__name__,template_folder='template')
```

3: Routing to the Html Page

Here, the declared constructor is used to route to the HTML page created earlier.

The `'/'` route is bound with the `front` function. Hence, when the home page of a web server is opened in the browser, the HTML page will be rendered.

```
@app.route('/')
```

```
def front():
```

```
    return render_template('front.html')
```

Main Function

This is used to run the application in localhost.

```
if __name__ == '__main__':
```

```
    app.run(debug=True)
```

CODE:
